Hard, Sharp, and Durable- Cutting edges require hardness and/or sharpness, and they need to last. PVD coatings add these characteristics to all types of cutting tools. Their proven performance has made PVD coating standard for all solid carbide cutting tools. You will find PVD coated tools in every industry Whether it's Drills, End Mills, Razor Blades, Carbide Inserts, etc.,

PVD tools are superior to other tools in:

- **Hardness-** coated tools can cut extremely hard materials
- **Speed-** cutting tools can work at higher speeds, reducing cycle times and increasing production
- **Heat-** High speed and dry cutting create intense temperatures on cutting surfaces. PVD coated tools exhibit thermal stability and resistance to oxidation, so they reduce the need for costly cutting fluids and coolants
- **Resistance-** to all types of wear (abrasive, cratering, edge build-up, and notching)
- **Reuse-** Re-sharpening and recoating a PVD coated tool will make it cut like new. This is far cheaper than buying a new tool
